

The eGig 11Mbps Wireless USB Adapter (eGUSB11) lets you easily network all of your PCs at 11 Mbps without the hassle of installing network cabling. Since the eGUSB11 draws all of its power over the USB Bus, there is no need for a separate power cord. A USB cable is provided with the adapter and after a simple set-up you can immediately begin to use the eGUSB11 to access your e-mail, servers, printers, and Internet connection, all over the network.

Product Features

- IEEE 802.11b Compliant
Up to 11 Mbps High-speed data transfer rate
Mini USB Interface and USB Bus Power
Compatible with Windows 98/2000/ME/XP
Hassle-Free Configuration Provided
Plug-and-Play
Works with All Standard Internet Applications
Interoperable with IEEE 802.11b (DSSS)
Capable of up to 128-bit WEP Encryption

Specifications

Table with two columns listing specifications: Standards Compliance, Signal Type, Modulation, Host Interface, Antenna, Data Encryption, Frequency band, Channel, Data Rate, Coverage Area, OS Support, LED Indicators, Power, Temperature, Humidity, Certification, USB Cable, Dimensions, Weight, Warranty.
